The above is a photograph of the wonderfully promising 1910 Seedling Potato

Now offered to the public for the first time. Selections from this basket and others from the same lot produced the crop now offered. The largest one in the picture was rejected, not planted. The size is somewhat exaggerated.
THE NEW KIND

This new potato was originated by Mr. and Mrs. G. B. Johnson of Newfane village, Vt., who have had considerable experience in starting new varieties from the seed bulbs, selecting only those that appear, after repeated trials, to have better qualities than any of the old kinds.

These potatoes have been further developed by selections, and two years culture on the farm of M. O. Howe, Newfane, Vt. Their table qualities and other merits were thoroughly tested before deciding to introduce them as a new variety. We have no need of any more new kinds unless they are better, at least in some respects, than any of the old ones. It has been estimated that there are 5000 varieties of potatoes now in cultivation. Out of these it might, perhaps, be possible to select five that according to the purpose wanted—as early or late—would be better than any of the
4995 others. It follows then that none of the 4995 varieties now in use are really worth cultivating because there is something better that might take their place.

Get the Best Potato for Planting

The 1910 Seedling

It is sold from first hands. No agents or dealers profits. The ordinary mailing price for which a new kind is sold by seedsmen and agents is $1.00 per pound. This is too high. Yet I know several that have paid $1.00 a pound for a new seedling, and have been great gainers by it. In one case, the products of the first pound was the largest lot of potatoes ever raised on one farm in Windham County, Vermont—last fall’s crop.

Charles N. Codner of Owego, Tioga County, N. Y., an expert potato culturist and dealer, who advertised in The New York Tribune Farmer 70 different kinds of seed potatoes for sale, sent to me last spring for a few of my potatoes to test, writes:
Mr. M. O. Howe, Newfane, Vt.

Dear Sir:—We are very much pleased with the seedling potatoes you sent us last spring. They had the most luxuriant vines all summer of any potatoes we had. They staid green until the frost killed them showing no disease. From the 10 lbs. you sent us we have dug something over 300 lbs. which we consider a good yield indeed.

Very respectfully yours,

Charles N. Codner.

11-8-09.

My own field, near Newfane village, had an exceedingly stout, vigorous growth of vines that continued to grow and remained a bright lively green until killed by frost, Oct. 13. I could append a large number of statements from neighbors, similar to the following from Rev. H. S. McHale of Brookline.

I was much impressed, as I passed by the farm of M. O. Howe last autumn, to note the magnificent growth and green appearance of his new variety of potatoes. They seemed exempt from blight and continued to grow far into October.

Rev. H. S. McHale.

Brookline, Vt.
I do not warrant any potato as proof against disease. There is no man that is proof against it, and any potato grown in a soil that is full of disease germs will surely be affected. But one man may be less subject to disease than another. So may one potato, and that one is the one I now offer. The experiment stations are now seeking for the most disease resistant varieties.

PREPAID MAIL PRICE

OF

THE 1910 SEEDLING

One pound 20 cts.—3 pounds 50 cts.
By express or freight, 1 peck $1.00—100 pounds $2.50 f. o. b.

The Wardsboro Potato

Also a new variety never before offered outside of the locality of its origin. One of the best medium early varieties known. Skin lightly shaded with brownish red.
Highly recommended for excellent table qualities, sound tubers, and stout vines. By mail prepaid 15 cts a pound—3 pounds 35 cts.

The Planet

This is one of the $1.00 a pound potatoes to which reference has been made, and which last season produced the largest crop of potatoes in Windham county. It is a pure white, rather late potato, an enormous yielder, and one of the very best for a main crop. Instead of becoming poorer by keeping through the winter it is rather improved. It is a most excellent potato. Instead of $1.00 a pound for which it was recently sold I can mail a pound, prepaid, for 15 cts.—3 lbs. for 35 cts. By express or freight f. o. b., 1 peck 50 cts., 100 lbs.—$1.50.

Get the Best

Now is the time while potatoes are low to get stocked up with the very best. One or more of the five worth cultivation out of the 5000 varieties now in use because better than the other 4995.
I can furnish selections from several of the best standard old varieties, as the Green Mountain, by mail prepaid, 1 lb. 10 cts., 3 lbs. 25 cts., by express or freight, 1 peck 30 cts., 100 pounds $1.50 f. o. b.

**Potato Balls**

Containing the seeds from which new varieties are grown. In the balls or in packets, 100 to 200 seeds mailed for 10 cts. The old kinds do not now bear seed, and seedsmen do not generally advertise them because they cannot get them—a few offer them at 25 cts. a packet.
